PREZ SEZ

Here I sit, waiting for the work day to end, so I can head out to the Field Day site. This year Field Day is (was) held at Cunningham Lake through the efforts of Frank Bruner, KØSST — 1983 Field Day Chairman.

I hope you were there 'cause Frank tells me anybody that shows up will have a chance to operate. The key word this year is "have fun" and the contesting takes second place.

Mitch, NØAZF, and the ARES troops have been putting in a lot of hours lately on weather watches — doing their usual good job. In fact, one night Tom, KØPQR, almost ran over me on his way to the North Omaha Weather Station.

If you haven't been checking into the Emergency Net during these watches, give it a try. The groups can always use the help, and it will give you a chance to sharpen your operating skills.

Dave Hamilton, NØCLW, reports we are getting a good crowd of people lined up for the KFAB Tour on July 29th with dinner at the Bellevue Queen. If you haven't made your reservation yet, give Dave or Sandy (NØCLQ) a call and add your name to the list.

Reminder — No regular meeting in July.

de Bill, NØANQ

WHAT MAKES AN IC WORK

We have the Palomar Repeater Committee Chairman to thank for a revelation. He has discovered what makes an integrated circuit work. He says that SMOKE is the thing that makes ICs work, because every time you let the smoke out of an IC it stops working, so it is very important to keep the smoke in an IC so that it will work. John Kuivinen, WB6IQS, is reported in the SCOPE as saying that he has made several tests to prove this theory — driving all the way to Mt. Palomar for his research.

Larsen Kūlrod Antennas

offer amateurs all the advantages enjoyed by the commercial two-way radio field.

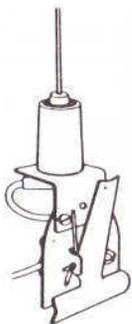

The Larsen Kūlrod® Antenna was initially designed to be a superior antenna for the highly competitive commercial 2-way radio market. Today, Larsen antennas are in the forefront for both the commercial and amateur fields because they combine top performance with long range dependability.

Magnetic Mount

Super-Efficient Air Wound Coils.

Larsen's loading coils are air wound for the most efficient transfer of communication energy. No power absorbing coil form is used. The base loading coil, when used, is made of extra heavy wire to stay in position and will not detune with years of use. Cutting the antenna rod, by following the instructions and cutting chart accompanying the antenna, assures lowest V.S.W.R.

The Kūlrod® Difference.

The Larsen Kūlrod® whip is made of 17-7 PH precision tapered stainless steel for durable flexibility, while minimizing radiation pattern distortion at higher vehicle speeds. It is quadruple-plated with a combination of nickel, copper and chrome for maximum power radiation efficiency. Two set screws keep Larsen antennas double-locked firmly in the base.

Trunk Lid Mount

Streamlined Appearance.

Larsen Kūlrod® Antennas are designed for eye appeal with a neat, low profile base that blends with today's vehicles. An occasional wipe with a soapy cloth will keep the entire antenna looking new and shiny. The special platings on mount hardware add to the appearance and keep corrosion build-up to a minimum.

Kūlrod® is a registered trademark of Larsen Electronics, Inc.
